paul.yj.zheng@gmail.com

EDUCATION

Bachelor, Software Engineering **2014.9-2018.06**

Harbin Institute of Technology(HIT), Weihai, School of Computer Science and Technology
GPA:85.0/100

EXPERIENCES

Research Assistant **2019.3-present**

GAP Lab, The Chinese University of Hong Kong, Shenzhen, with *Prof. Xiaoguang HAN*

Research Assistant **2018.7-2019.1**

Visual Computing and Machine Intelligence Research Center, HIT, with *Prof. Pengbo BO*

Undergraduate Research Assistant **2016.4-2018.6**

Visual Computing and Machine Intelligence Research Center, HIT, with *Prof. Pengbo BO*

RESEARCH INTERESTS

My current research focuses on shape generation with data-driven methods. I also have broad interests in computer graphics and computer vision.

RESEARCH EXPERIENCES

Computing the Maximal Developability of a Ruled Surface **2018.11-2019.1**

We designed a simple and effective algorithm to find an optimal and continuous mapping function between the two boundary curves of a ruled surface. This mapping function can ensure that the ruled surface achieves its maximal developability.

Multi-Strip Developable Surfaces Design and Optimization **2018.7-2018.12**

We proposed an optimization method for multi-strip developable ruled surfaces modeling. This method relaxes curve interpolation constraint but achieves a smooth surface of high accuracy of developability with controllable curve distance errors.

Developable Surface in Ship Hull Design**2017.12-2018.6***Excellent Graduation Project in HIT*

A design system based on developable surface for optimizing ship lines and hulls has been designed and implemented. Using this system, ship designers can design smooth ship lines with interactive operations and obtain quasi-developable ship hulls through optimization.

Developable Surface Construction between Two Boundaries**2016.12-2017.8***GDC 2017, Yantai, Oral Report by Yujian*

The subject is aimed to find a robust method which can construct a quasi-developable surface between two boundaries using several specific numerical optimization techniques. The phased results have been applied in ship hull design, which have been accepted by *J Comput-Aid Desig Comput Graph*.

Volume Rendering**2017.7***GDC 2017, Yantai, Oral Report by Yujian*

This work is an optimization of Volume Illustration which is a well-known method in volume rendering based on non-photorealistic rendering.

Developable Surface Reconstruction from Noisy Data**2016.5-2016.11***China CAD&CG 2016*

We presented an innovative method for Developable Surface Reconstruction from Noisy Data. In this work, I implemented an optimization approach to smooth normal vector field of given model via L0-norm minimization.

PROFESSIONAL SKILLS

Standardized Test: IELTS(6.5)**Programming Languages:** C/C++, Java**Libraries and Tools:** HLBFGS, OpenGL, OpenMesh, GeometricTools, Eigen**AWARDS**

Excellent Student, HIT**2017****National Aspiration Scholarship, Ministry of Education, China****2016**
